SUMMARY

Solutions consultant and founder with a focus on building systems that solve operational bottlenecks. At Method CRM, I manage 20+ concurrent client engagements, consistently leading the team in billable output and client satisfaction while developing internal automation tools used by leadership. Previously founded Clubhouse Exchange, a secondary marketplace for golf equipment, and drove 30% revenue growth at a fitness studio by implementing their first data-driven scheduling and performance tracking systems. MSc from McGill University with a background in research and data analysis.

EXPERIENCE

Business Solutions Specialist — Method CRM, Toronto Aug 2023 – Present

Promoted from Junior Solutions Specialist. Own the full engagement lifecycle — discovery, scoping and estimation, technical build, integration, onboarding, and retention — across 20 concurrent dedicated and ad hoc accounts in manufacturing, wholesale, distribution, field service, and nonprofit.

Delivery & client ownership

- Ranked at the top of the consulting team on **billable hours and utilization**, exceeding the 69% utilization target every month of the review period — including months with PTO taken and while shipping non-billable internal tooling
- Ranked at the top of the team on **client satisfaction (NPS)** and on **account user growth** since the metric was first tracked in 2025; sustained dedicated client health scores above target 12 consecutive months, and delivered 110.85% of the Q1 2026 user-growth target
- Ran discovery and scoping as a repeatable practice — phased estimates with open questions surfaced as explicit blockers rather than absorbed as delivery risk; owned a 25-item multi-module tracker end to end for a key account, prioritizing critical defects against enhancements
- Proactively flagged 10+ client escalations before they reached churn or formal escalation, including two accounts identified as churn risks through structured health analysis and a documented retention save on an account actively considering cancellation
- Created team capacity by scoping, documenting, and transitioning 3 batches of work to junior consultants, each with a runbook enabling independent execution without lead escalation

Systems built for clients

- Built **full-suite operations systems for manufacturing, wholesale, and distribution clients** — work order hierarchies with crew assignment, production stage boards, consumables inventory with adjustment ledgers, sales-order-to-fulfillment conversion, and credit limit enforcement — cutting cycle time, eliminating double data entry between CRM and accounting, and improving data accuracy
- Built **commission and payout workflows** for time-based OTE, sales OTE, and multi-variable structures — auditable calculations non-technical teams could operate independently
- Built **sales and operations reporting dashboards**: executive pipeline views filterable by rep, consolidated work order and campaign reporting, unified chronological customer timelines, and donor retention analytics with lapse-risk flagging for a national nonprofit
- Delivered **7 external API integrations** — UPS shipping (OAuth2/REST, replacing a legacy on-premise dependency, with reusable per-carrier payload templating), Avalara AvaTax across two accounts, Katana MRP, and a Google Apps Script to Tableau profit/cost/revenue pipeline
- Diagnosed and escalated platform-level defects across work order state management, time card parsing, notification logic, and QuickBooks header/line sync — documenting undocumented platform behaviour into a shared reference used team-wide

Automation & internal tools

- Designed and deployed a call-prep and audit suite to improve client handling; **unsatisfactory call ratings dropped from 33% to 0%** and mean scores increased by 12.9 points over nine weeks.
- Automated the pre-call intelligence pipeline by centralizing meeting transcripts and CRM history into briefs, saving consultants 30–45 minutes of manual research per account.
- Developed 14+ automated workflows for diagnostics, health scoring, and log triage to standardize technical support and client communications across the team.
- Built and deployed weekly user-trend instrumentation across a **21-consultant org** (per-account license deltas, trend classification, decline-streak detection), giving PS its first systematic view of seat movement and surfacing that expansion was not happening organically
- Drove org-wide AI adoption through two all-hands enablement sessions and a prompt-engineering architecture workshop; authored a product feature request to Method's product team for native AI-assisted CRM data entry, covering problem framing, auditability architecture, v1 scope, and business impact

Founder — Clubhouse Exchange, Toronto Jan 2026 – Present

- Designed and built a full-stack marketplace (Next.js, TypeScript, PostgreSQL, Prisma, Stripe) featuring automated pricing, condition grading, and a seller negotiation hub.
- Drove **35 completed sales from 45 listings** since launch — a ~55% on-platform sell-through rate — across 33 registered users, plus a first fitting-and-procurement client validating a second service line
- Ran the resale operation as user zero (15 units, **63% margin**) to learn the market firsthand, then productized that workflow into the reseller sourcing dashboard now shipped in-product
- Ran two multi-channel acquisition campaigns (email, LinkedIn, TikTok/Instagram); the LinkedIn campaign alone drove ~300 page views during its run

Data Strategy Manager — Loft Cycle Club, Toronto Aug 2022 – Aug 2023

- **Grew ARR 30%** in a competitive boutique fitness market by making performance measurable and acting on it
- Hypothesized that class scheduling, class mix, and instructor placement were unoptimized — then built the Mariana Tek and BrandBot API integrations needed to test it, defining 5 metrics that isolated instructor and class performance
- Used those metrics to turn around underperforming classes (instructor reassignment, then time-slot changes) and designed new instructor bonus tiers weighted toward class size and higher-margin formats, lifting performance while reducing internal cost
- Rebuilt front-desk operations — SOPs, training guides, and junior-staff enablement connecting daily behaviour to the metrics that mattered

PROJECTS

ScoutAI — Founding Member, Basketball Analytics 2022

- Led a 3-person founding team building predictive player-evaluation statistics across NBA and NCAA data. Solved cross-source entity resolution with a fuzzy-matched player-profile database and validated candidate metrics against future career earnings. Offensive metrics failed to beat existing composites; the **defensive metric outperformed the dBPM gold standard** at surfacing high-impact defenders, with the scope limit that college defence does not transfer consistently to the pros.

EDUCATION

MSc, Plant Science / Biochemistry — McGill University 2021 – 2023

- Characterized how CHIL protein variants direct isoflavonoid biosynthesis, developing assays for both mechanism and output; found some variants raise total yield while others trade yield for branch-specific efficiency. Peer-reviewed publication; supervised undergraduate researchers.

BSc, Biotechnology — Queen's University · Certificate in Business, Smith School of Business 2018 – 2021

- Thesis: computational analysis of PUB protein variants in plant immune signalling; contributed to a published paper on how small sequence changes drive large differences in immune response.

SKILLS

Product Discovery and requirements · scoping and phased estimation · instrumentation and metric design · roadmap ownership · adoption measurement · client onboarding and enablement · go-to-market

Technical REST APIs and OAuth2 · SQL/OData · Python · Next.js/React · data modelling · BigQuery · Tableau · QuickBooks Desktop and Online sync

AI Agentic workflow design · MCP development · LLM skill authoring · prompt engineering · org-wide AI enablement
